📄 PROJECT REPORT – CSE0001 Digital Literacy

Title Page

Digital Literacy Portfolio Project
Course Code: CSE0001
Course Title: Digital Literacy

Name: Adarsh Sharma
Registration Number: [25BCE11129]
Branch: Computer Science Engineering (CSE)
Year: 1st Year
University: VIT Bhopal

Date: [29-03-2026]

Introduction (100–150 words)

The Digital Literacy Portfolio project aims to develop essential digital skills required for academic and professional success. As a Student Digital Ambassador, the objective of this project is to understand and promote responsible and effective use of digital tools and platforms.

This project includes five tasks covering different aspects of digital literacy such as creating an infographic, building a professional online presence, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime awareness. Each task helps in developing practical knowledge that can be applied in real-life situations.

Through this project, I gained hands-on experience with various digital tools and platforms. It also helped me understand the importance of maintaining a professional digital identity and staying safe online.

Task 1: Infographic (150–200 words)

I created a digital literacy awareness infographic using Canva, which is a free and easy-to-use design tool. Canva provides a variety of templates, icons, and design elements that make it simple to create visually appealing content.

The infographic explains the concept of digital literacy and highlights its importance for students. It covers key topics such as useful digital tools like Google Docs and Zoom, safe internet practices such as using strong passwords and avoiding suspicious links, and proper email etiquette for professional communication. I used icons and short bullet points to make the content easy to understand.

One thing I found interesting while working on this task was how visual elements can improve the clarity and effectiveness of information. However, I found it slightly difficult to fit all the important details into a single page without making the design look crowded. Overall, this task helped me improve my design and presentation skills.

Task 2: Digital Portfolio (150–200 words)

For this task, I created my digital portfolio using GitHub, LinkedIn, and Kaggle. These platforms are widely used for professional networking, showcasing skills, and learning.

GitHub is used to store and manage coding projects, and I created a profile README to introduce myself and my goals. LinkedIn is a professional networking platform where I added my educational details, including my degree and institution. Kaggle is a platform for data science and machine learning, and I created a basic profile to explore datasets and competitions.

Over the next four years, I plan to regularly update my GitHub with projects and coding practice. I will use LinkedIn to connect with professionals and explore internship opportunities. Kaggle will help me improve my analytical and problem-solving skills. These

platforms will help me build a strong digital presence and prepare for future career opportunities.

Task 3: Platforms (150–200 words)

In this task, I explored both coding and collaboration platforms. I used HackerRank to practice coding and completed a beginner-level problem called “Solve Me First.” This helped me understand basic programming logic and problem-solving techniques.

For collaboration, I used Google Forms to create a Digital Literacy Awareness Quiz. The form contains five questions related to digital literacy topics such as online safety, digital tools, and communication practices. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed.

These tools are very useful for academic purposes. HackerRank allows me to practice coding regularly and improve my skills. Google Forms is useful for creating surveys, quizzes, and collecting feedback efficiently. This task helped me understand how digital tools can support both learning and collaboration.

Task 4: Email Etiquette (100–150 words)

Digital communication plays an important role in academic and professional environments. Poor communication can create misunderstandings and leave a negative impression. For example, sending an email without a proper subject line or using informal language when communicating with a professor can appear unprofessional.

This situation can be improved by following proper email etiquette such as using a clear subject line, maintaining a polite tone, and structuring the message properly. It is also important to proofread emails before sending them to avoid mistakes.

Through this task, I learned the importance of writing clear and professional emails. It also helped me understand how to communicate responsibly on social media by following basic do’s and don’ts.

Task 5: Cybercrime Awareness (100–150 words)

While researching cybercrime, I was surprised by how common and simple many online scams are, especially UPI fraud. Many attacks do not involve complex hacking but instead rely on tricking users into making mistakes.

One important habit I will change is being more careful before approving any online payment request or clicking on unknown links. I will always verify the source before taking any action.

This task helped me understand the importance of digital safety and staying alert while using online platforms. It also increased my awareness about reporting cybercrime through official channels.

Conclusion (100 words)

This project helped me gain a better understanding of digital literacy and its importance in today's world. I learned how to use various digital tools effectively and responsibly. The tasks improved my skills in communication, online safety, and professional presence.

Overall, this project was a valuable learning experience that will help me in both my academic journey and future career.
